

## LEARNING MORE ABOUT TEACHING

Within the Department of Statistical Sciences, you are welcome to ask your course supervisor, other experienced TAs or the TA coordinator if you have questions about TAing our courses or feel like you need more support to be effective in your TA role.

Although this is optional, if you are interested in seeking out more professional development opportunities to further build your skills, which will not only improve your teaching skills, but will help you develop valuable transferable skills (e.g., communication and time/project management and planning skills) that will be an asset to you when you are looking for a position and be a nice addition to your CV, please check out some of these:

- The Centre for Teaching Support & Innovation (CTSI) offers excellent programming for graduate students in their TA Training Program (TATP). They have many useful resources posted in their “Teaching Toolkit” (<http://tatp.utoronto.ca/teaching-toolkit/>), you are welcome to attend any individual workshops of interest to you and/or work toward a certificate (*Teaching Fundamentals* or *Advanced University Teaching Preparation*). See <http://tatp.utoronto.ca/> for more information.
- There is a free, self-paced online course on “Teaching and Learning in Higher Education” (no registration required) including materials on how students learn, active learning, globalization of learning, course design, assessment strategies, ethical principles and professionalism in university teaching. These modules are available at:  
<http://www.queensu.ca/teachingandlearning/modules/home.html>
