THE FIELDS INSTITUTE

BIG DATA

THEMATIC PROGRAM ON STATISTICAL INFERENCE, LEARNING, AND MODELS FOR
JANUARY - JUNE, 2015

PROGRAM

JANUARY 12 - 23, 2015
Opening Conference and Boot Camp
Organizing Committee: Nancy Reid (Chair), Sallie Keller, Lisa Lix, Bin Yu

JANUARY 26 - 30, 2015
Workshop on Big Data and Statistical Machine Learning
Organizing committee: Ruslan Salakhutdinov (Chair), Dale Schuurmans, Yoshua Bengio, Hugh Chipman, Bin Yu

FEBRUARY 9 - 13, 2015
Workshop on Optimization and Matrix Methods in Big Data
Organizing Committee: Stephen Vavasis (Chair), Anima Anandkumar, Petros Drineas, Michael Friedlander, Nancy Reus, Martin Wainwright

FEBRUARY 23 - 27, 2015
Workshop on Visualization for Big Data: Strategies and Principles
Organizing Committee: Nancy Reid (Chair), Susan Holmes, Snehelata Huzurbazar, Hadley Wickham, Leland Wilkinson

MARCH 23 - 27, 2015
Workshop on Big Data in Health Policy
Organizing Committee: Lisa Lix (Chair), Constantine Gatsonis, Sharon-Lise Normand

APRIL 13 - 17, 2015
Workshop on Big Data for Social Policy
Organizing Committee: Sallie Keller (Chair), Robert Groves, Mary Thompson

JUNE 13 - 14, 2015
Closing Conference
Organizing Committee: Nancy Reid (Chair), Sallie Keller, Lisa Lix, Hugh Chipman, Ruslan Salakhutdinov, Yoshua Bengio, Richard Lockhart
to be held at AARMS of Dalhousie University

GRADUATE COURSES

JANUARY TO APRIL 2015
Large Scale Machine Learning
Instructor: Ruslan Salakhutdinov (University of Toronto)

JANUARY TO APRIL 2015
Topics in Inference for Big Data
Instructors: Nancy Reid (University of Toronto), Mu Zhu (University of Waterloo)

This thematic program emphasizes both applied and theoretical aspects of statistical inference, learning and models in big data. The opening conference will serve as an introduction to the program, concentrating on overview lectures and background preparation. Workshops throughout the program will highlight cross-cutting themes, such as learning and visualization, as well as focus themes for applications in the social, physical and life sciences. It is expected that all activities will be webcast using the FieldsLive system to permit wide participation. Allied activities planned include workshops at PIMS in April and May and CRM in May and August.

SMILE IF YOU BUNT

Steve C. Wang, an associate professor of statistics at Swarthmore College, charted baseball managers from the 2007 season as Chernoff faces, a method of using the heights, widths and angles of facial features to represent different sets of numbers.

*Percentage of players who had the advantage of batting against an opposite-handed pitcher at the start of the game.

Note: Because different rules cause National League managers to use more pinch-hitters, for example, each manager's rates are compared with his league's average.

Encoding of data measures can be far more elaborate. The plotted points here are Chernoff faces, which reduce well, maintaining legibility even with individual areas of .05 square inches as shown.³ The analyst would observe the standard X-Y scatter plot and then turn to the within-scatter detail, seeking clusters of similar observations over the X-Y plane. Outlying faces and those inconsistent with others in the neighborhood—they are, of course, *strangers*—should be identified by observation number or name.

³Herman Chernoff, "The Use of Faces to Represent Points in k-Dimensional Space Graphically," *Journal of the American Statistical Association* 68 (June 1973), 361-368. For an application of faces located over two dimensions, see Howard Wainer and David Thissen, "Graphical Data Analysis," *Annual Review of Psychology*, 32 (1981), 191-241.

With cartoon faces and even numbers becoming data measures,

1983

“... we would appear to have reached the limit of graphical economy of presentation, imagination, and, let it be admitted, eccentricity”

With cartoon faces and even numbers becoming data measures,

The Use of Faces to Represent Points in k -Dimensional Space Graphically

HERMAN CHERNOFF *

A novel method of representing multivariate data is presented. Each point in k -dimensional space, $k \leq 18$, is represented by a cartoon of a face whose features, such as length of nose and curvature of mouth, correspond to components of the point. Thus every multivariate observation is visualized as a computer-drawn face. This presentation makes it easy for the human mind to grasp many of the essential regularities and irregularities present in the data. Other graphical representations are described briefly.

1. INTRODUCTION

A graphical method of representing points in k -dimensional space is presented for consideration. The object is to represent multivariate data, subject to strong but possibly complex relationships, in such a way that an investigator can quickly comprehend relevant information and then apply appropriate statistical analysis. The method consists of representing a point in k -dimensional space by a drawing of a face whose characteristics are determined by the position of the point. A sample of

2.1 Fossil Data

Eight measurements were made on each of 88 nummulited specimens from the Eocene Yellow Limestone Formation of northwestern Jamaica. Two measurements thought to be age-dependent were discarded. One specimen (Number 34) was rejected because of a permutation in an early copy of the measurements for that specimen which cast doubt upon its accuracy. The data for Example 1 (see Table 1' in the appendix) represent

- Z_1 inner diameter of embryonic chamber (in microns)
- Z_2 total number of whorls
- Z_3 number of chambers in first whorl
- Z_4 number of chambers in last whorl
- Z_5 maximum height of chambers in first whorl (in microns)
- Z_6 maximum height of chambers in last whorl (in microns)

The 87 faces corresponding to the 87 remaining specimens are presented in sequential order as indicated in Figure 1A. This order was selected *after* the data had been grouped into three clusters by an analytic technique [9].

was produced and is presented in Figure 1B. I clustered these visually. The groups were:

- I: (1, 2, 3, 9, 22, 29)
- II: (4, 5, 6, 7, 8)
- III: (10, 11, 14, 23, 25, 26, 27)

As presented these lists do not completely do justice to the information obtained from the faces. They do not indicate which specimens are obviously members of a group and which were regarded as borderline. Each specimen was forced into some group, whereas one would

The rise of AI

“This approach is an amusing reversal of a common one in artificial intelligence. Instead of using machines to discriminate between human faces by reducing them numbers, we discriminate between numbers by using the machine to do the brute labor of drawing faces and leaving the intelligence to the humans, who are still more flexible and clever”

The Man Who Helped Turn Toronto Into a High-Tech Hotbed

Scientists plan huge European AI hub to compete with US

Exclusive: In an open letter, the scientists say the proposed Ellis institute is essential to avoid brain drain to big tech firms

Visualization for Big Data Strategies and Principles

- Statistical graphics
- Information visualization
- Scientific visualization
- Journalism

The poster for the Fields Institute Thematic Program on Statistical Inference, Learning, and Models for Big Data, running from January to June 2015. It features a background map of Canada with various data points and network diagrams. The Fields Institute logo is in the top left. The title 'BIG DATA' is in large, bold, white letters on the right. The program details are listed in a structured format on the left, with the 'Workshop on Visualization for Big Data: Strategies and Principles' highlighted by a red oval. The organizing committee and international advisory committee are listed on the right. The bottom section details graduate courses. A footer at the very bottom provides contact information and a website link.

THE FIELDS INSTITUTE

**THEMATIC PROGRAM ON
STATISTICAL INFERENCE,
LEARNING, AND MODELS FOR
BIG DATA**

JANUARY – JUNE, 2015

PROGRAM

JANUARY 12 – 23, 2015
Opening Conference and Boot Camp
Organizing Committee: Nancy Reid (Chair), Sallie Keller, Lisa Lix, Bin Yu

JANUARY 26 – 30, 2015
Workshop on Big Data and Statistical Machine Learning
Organizing committee: Ruslan Salakhutdinov (Chair), Dale Schuurmans, Yoshua Bengio, Hugh Chipman, Bin Yu

FEBRUARY 9 – 13, 2015
Workshop on Optimization and Matrix Methods in Big Data
Organizing Committee: Stephen Vavasis (Chair), Anima Anandkumar, Petros Drineas, Michael Friedlander, Nancy Reid, Martin Wainwright

FEBRUARY 23 – 27, 2015
Workshop on Visualization for Big Data: Strategies and Principles
Organizing Committee: Nancy Reid (Chair), Susan Holmes, Snehelata Huzurbazar, Hadley Wickham, Leland Wilkinson

MARCH 23 – 27, 2015
Workshop on Big Data in Health Policy
Organizing Committee: Lisa Lix (Chair), Constantine Gatsonis, Sharon-Lise Normand

APRIL 13 – 17, 2015
Workshop on Big Data for Social Policy
Organizing Committee: Sallie Keller (Chair), Robert Groves, Mary Thompson

JUNE 13 – 14, 2015
Closing Conference
Organizing Committee: Nancy Reid (Chair), Sallie Keller, Lisa Lix, Hugh Chipman, Ruslan Salakhutdinov, Yoshua Bengio, Richard Lockhart
to be held at AARMS of Dalhousie University

GRADUATE COURSES

JANUARY TO APRIL 2015
Large Scale Machine Learning
Instructor: Ruslan Salakhutdinov (University of Toronto)

JANUARY TO APRIL 2015
Topics in Inference for Big Data
Instructors: Nancy Reid (University of Toronto), Mu Zhu (University of Waterloo)

This thematic program emphasizes both applied and theoretical aspects of statistical inference, learning and models in big data. The opening conference will serve as an introduction to the program, concentrating on overview lectures and background preparation. Workshops throughout the program will highlight cross-cutting themes, such as learning and visualization, as well as focus themes for applications in the social, physical and life sciences. It is expected that all activities will be webcast using the FieldsLive system to permit wide participation. Allied activities planned include workshops at PIMS in April and May and CRM in May and August.

ORGANIZING COMMITTEE

Yoshua Bengio (Montréal)
Hugh Chipman (Acadia)
Sallie Keller (Virginia Tech)
Lisa Lix (Manitoba)
Richard Lockhart (Simon Fraser)
Nancy Reid (Toronto)
Ruslan Salakhutdinov (Toronto)

INTERNATIONAL ADVISORY COMMITTEE

Constantine Gatsonis (Brown)
Susan Holmes (Stanford)
Snehelata Huzurbazar (Wyoming)
Nicolai Meinshausen (ETH Zurich)
Dale Schuurmans (Alberta)
Robert Tibshirani (Stanford)
Bin Yu (UC Berkeley)

For more information, allied activities off-site, and registration, please visit:

- perception, communication, design

Statistical Graphics

1. Principles of Graph Construction

terminology, vision,
understanding, strategy

2. Graphical Methods

3. Graphical Perception

color, texture, scale

The grammar of graphics

Leland Wilkinson*

The grammar of graphics (GoG) denotes a system with seven classes embedded in a data flow. This data flow specifies a strict order in which data are transformed from a raw dataset to a statistical graphic. Each class contains multiple methods, each of which is a function executed at the step in the data flow corresponding to that class. The classes are orthogonal, in the sense that the product set of all classes (every possible sequence of class methods) defines a space of graphics which is meaningful at every point. The meaning of a statistical graphic is thus determined by the mapping produced by the function chain linking data and graphic. © 2010 John Wiley & Sons, Inc. *WIREs Comp Stat* 2010 2 673–677 DOI: 10.1002/wics.118

Keywords: visualization; statistical graphics

Object-oriented graphics system providing a description of the construction

The Grammar of Graphics

1. Specification

Data, trans, scale, coord,
element, guide

2. Assembly

Geometry, layout, aesthetics

3. Display

Rendering – static, dynamic, ...

honeyplot +

```
geom_line(aes(honey$year, honey$runmean), col = "green") +  
geom_point(aes(honey$year, honey$average), ) +  
scale_x_continuous(breaks=1970:2014) +  
geom_smooth(method="loess", span=.75, se=F) +  
scale_y_continuous(breaks=seq(0, 140, by=10)) +  
theme(axis.text.x = element_text(angle=45))
```

How to visualize data with cartoonish faces ala Chernoff

By [Nathan Yau](#)

The goal of Chernoff faces is to show a bunch of variables at once via facial features like lips, eyes, and nose size. Most of the time there are better solutions, but the faces can be interesting to work with.

Ross-Chernoff Glyphs Or: How Do We Kill Bad Ideas in Visualization?

Figure 1: A meta-Ross-Chernoff visualization of Bob Ross's painting subjects, over time. Horizontal position is the season of "The Joy of Painting," the height of the treeline is the percentage of paintings depicting trees, the height of the mountains the percentage of paintings depicting mountains, and the height of the clouds is the percentage of paintings depicting clouds. From a dataset provided by FiveThirtyEight [12]
